

PRESS RELEASE
Date: 02 November 2004

Linxcel Europe Limited announces VERITAS i³ Application Performance Management partnership and reseller accreditation.

Modern multi-tier applications are increasingly being delivered as service-oriented (SO) business-aligned architectures. At Linxcel we have long recognized that a proactive and predictive approach to Application Performance Management (APM) is essential in order to guarantee service delivery times and customer satisfaction.

"We are delighted to announce our VERITAS i³ APM accreditation", said Mark Clark, Managing Director, Linxcel Europe Limited. "This cements our ongoing relationship with VERITAS i³ and recognizes the success of our delivery focused approach in some of the largest i³ deployments in EMEA. It enables us to further support and invest in new and existing VERITAS i³ customers in all areas of i³ deployment including installation, configuration, performance problem analysis and resolution, and training. The Linxcel team have over a decade of experience in delivering integrated end-to-end APM solutions and our VERITAS partnership further enhances our capabilities."

"Linxcel are a key partner in our ongoing commitment to delivering outstanding application performance benefits that the VERITAS i³ APM framework can provide", said Steven Rose, UK Managing Director for VERITAS.

"The combination of our professional experts alongside best-of-breed i³ APM technology enables us to identify and fix performance problems in multi-tier applications. In some cases, these have previously proved impossible to fix over extended periods of time using traditional tools and techniques" said Geoff Ingram, Technical Director, Linxcel Europe Limited. "What distinguishes VERITAS i³ is the integrated end-to-end 24x7 view of performance from browser to disk, the low impact of monitoring, and not least, the need for zero changes in either the database or application server tier code".

About VERITAS Software

VERITAS Software, one of the 10 largest software companies in the world, is a leading provider of software to enable utility computing. In a utility computing model IT resources are aligned with business needs, and business applications are delivered with optimal performance and availability on top of shared computing infrastructure, minimizing hardware and labor costs. With 2003 revenues of \$1.75 billion, VERITAS delivers products and services for data protection, storage & server management, high availability and application performance management that are used by 99 percent of the Fortune 500. More information about VERITAS Software can be found at www.veritas.com.
